

# LABORATORY RECORD

Course: Full Stack Web Development

Course Code: 23CM4121

Experiment No.: 1

Student Name: K. Hansikha

Roll No.: A24126552264

Date: 07/07/2026

---

## 1. TITLE

**Create and Design a Static Webpage Using HTML**

---

## 2. AIM

To create a basic static webpage using HTML elements such as headings, paragraphs, hyperlinks, lists, tables, navigation, and structural page elements.

---

## 3. OBJECTIVE

- To learn the fundamental structure of an HTML document.
  - To develop a simple static webpage using HTML.
  - To display information using different heading and paragraph elements.
  - To create hyperlinks for webpage navigation.
  - To use ordered and unordered lists.
  - To present student details in tabular form.
  - To organise webpage content using header, navigation, main, and footer elements.
- 

## 4. THEORY

HTML (HyperText Markup Language) is a markup language used to organize and present content on webpages. An HTML document normally consists of the html, head, and body sections. The webpage is divided into meaningful structural areas using elements such as header, nav, main, and footer. Headings are used to define different levels of information, while paragraphs are used to display descriptive content.

Lists can be created using unordered-list and ordered-list elements. An unordered list displays items using bullet points, whereas an ordered list displays items in sequence. Tables are created using elements such as table, tr, th, and td to arrange information in rows and columns. Horizontal rules can also be used to visually separate different sections of a webpage. These basic HTML elements together allow a simple and well-organised static webpage to be created.

---

## 5. ALGORITHM / PROCEDURE

1. Create an HTML file named index.html.
  2. Declare the HTML document structure and add the title in the head section.
  3. Create a header containing the main heading and welcome message.
  4. Add a navigation section containing Home and Contact links.
  5. Create the main section of the webpage.
  6. Add an About section using headings and paragraph elements.
  7. Create an unordered list to display the HTML components used.
  8. Create a table containing student name, branch/course, and year.
  9. Add an ordered list to display technical skills.
  10. Add a footer containing copyright information.
  11. Save the file and open it in a browser to verify the webpage.
- 

## 6. PROGRAM

index.html

```
<!DOCTYPE html>
<html>
<head>
  <title>College Information Page</title>
  <link rel="stylesheet" href="style.css">
</head>

<body>

  <header>
    <h1>College Information Portal</h1>
    <p>Welcome to our college webpage</p>
  </header>

  <nav>
    <a href="#">Home</a>
    <a href="#">Courses</a>
    <a href="#">Students</a>
    <a href="#">Contact</a>
  </nav>

  <main>

    <section>
      <h2>About Our College</h2>
```

```

    <p>
      This webpage provides basic information about
      the college, courses and student activities.
    </p>
  </section>

  <section>
    <h2>Courses Offered</h2>

    <ul>
      <li>Computer Science Engineering</li>
      <li>Electronics and Communication</li>
      <li>Information Technology</li>
    </ul>
  </section>

  <section>
    <h2>Student Details</h2>

    <table>
      <tr>
        <th>Name</th>
        <th>Branch</th>
        <th>Year</th>
      </tr>

      <tr>
        <td>Hansikha</td>
        <td>CSM</td>
        <td>3rd Year</td>
      </tr>
    </table>
  </section>

</main>

<footer>
  <p>&copy; 2026 College Information Portal</p>
</footer>

</body>
</html>

```

## Style.css

```

* {
  box-sizing: border-box;
}

body {
  margin: 0;
  font-family: Arial, sans-serif;
  background-color: #f2f4f7;
  color: #333;
}

header {
  background-color: #3949ab;
  color: white;
  text-align: center;
  padding: 30px;
}

header h1 {
  margin: 0 0 8px;
}

```

```

header p {
    margin: 0;
}

nav {
    background-color: #222;
    text-align: center;
    padding: 14px;
}

nav a {
    color: white;
    text-decoration: none;
    margin: 0 20px;
}

nav a:hover {
    text-decoration: underline;
}

main {
    width: 90%;
    max-width: 900px;
    margin: 25px auto;
}

section {
    background-color: white;
    padding: 25px;
    margin-bottom: 20px;
    border-radius: 8px;
    box-shadow: 0 2px 6px #ccc;
}

section h2 {
    color: #3949ab;
    margin-top: 0;
}

li {
    margin: 10px 0;
}

table {
    width: 100%;
    border-collapse: collapse;
}

th,
td {
    border: 1px solid #999;
    padding: 12px;
    text-align: center;
}

th {
    background-color: #3949ab;
    color: white;
}

tr:hover {
    background-color: #eeeeee;
}

footer {
    background-color: #222;
    color: white;
    text-align: center;
    padding: 18px;
}

```

```

    margin-top: 30px;
}
@media (max-width: 600px) {
    nav a {
        display: block;
        margin: 8px;
    }

    main {
        width: 95%;
    }

    table {
        font-size: 14px;
    }
}

```

## 7. CODE EXPLANATION

| Code Element              | Explanation                                                                                                                                                                 |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <!DOCTYPE html>           | Specifies that the document follows HTML5 standards.                                                                                                                        |
| <html>, <head>, <body>    | Define the main structure of the HTML document.                                                                                                                             |
| <title>                   | Defines the title displayed on the browser tab.                                                                                                                             |
| <header>                  | Creates the header containing the main heading and welcome message.                                                                                                         |
| <nav> and <a>             | Provide navigation links for Home and Contact.                                                                                                                              |
| <main>                    | Contains the primary webpage content.                                                                                                                                       |
| <h1>, <h2>, <h3>          | Create different levels of headings.                                                                                                                                        |
| <p>                       | Displays paragraph text.                                                                                                                                                    |
| <ul> and <li>             | Display the HTML components as an unordered list.                                                                                                                           |
| <table>, <tr>, <th>, <td> | Create and populate the student information table.                                                                                                                          |
| <ol> and <li>             | Display an ordered list.                                                                                                                                                    |
| <footer>                  | Displays the copyright text at the bottom of the page.                                                                                                                      |
| style.css                 | Contains CSS rules in the repository, including layout, navigation, forms, buttons, footer, and a responsive media query, but it is not linked from the current index.html. |

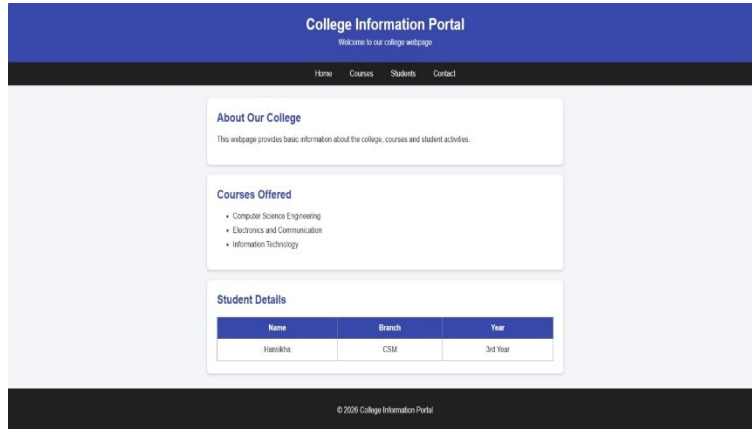

## 8. TEST CASES AND EXECUTION DATA

The following checks are derived from the elements and visible content implemented by the current program.

| Test  | Test Case           | Expected Result                                              | Actual Result                             | Status |
|-------|---------------------|--------------------------------------------------------------|-------------------------------------------|--------|
| TC-01 | Open the webpage    | College Information Portal webpage should load successfully. | Webpage loaded successfully.              | Pass   |
| TC-02 | Check Navigation    | Home and Contact links should be displayed.                  | Both navigation links are visible.        | Pass   |
| TC-03 | HTML components     | Headings, paragraph, lists and table should appear.          | All specified elements are displayed.     | Pass   |
| TC-04 | Check Student table | Student name, branch and year should be displayed.           | Hansikha, CSM and 3rd Year are displayed. | Pass   |
| TC-05 | Courses Offered     | all Courses should appear as an ordered list.                | Multiple courses are displayed            | Pass   |

## 9. OUTPUT

### Output 1: Static HTML Webpage

The webpage displays the college heading, welcome message, navigation links, college information, HTML element list, student details table, technical skills list, and footer.

## 10. RESULT

Thus, a static webpage was successfully designed using basic HTML elements. The webpage includes headings, paragraphs, hyperlinks, lists, a student information table, navigation, and footer elements, and the output was successfully verified in a web browser.
